ProTran1

ProTran1 is devoted to developing and delivering Certified Safety and Security Training Programs, SOP writing, and Grant Funding Application Assistance in the mass transit industry. As transit systems continue expansion and new systems open, the Overhead Contact Systems (OCS) and Heavy Rail Systems will need these services even more to meet the mounting safety and security concerns. ProTran1, in partnership with IEEE, NTI and APTA, has developed CERTIFIED training programs to address each of the critical audiences that work near and around OCS and Heavy Rail.

Each course is designed to meet the following objectives

- REVIEW** and familiarize participants with the OCS and Heavy Rail environment.
- IDENTIFY** the dangers associated with working in the OCS and Heavy Rail environment.
- ESTABLISH** and reinforce safe operational practices.
- ENSURE** proper response and action during incidents and emergencies.
- WRITE** and implement industry accepted SOP's.
- FUNDING** applications for DHS and FTA Grant programs to maximize funding opportunities.

The course will be offered in three designs, catering specifically to three different groups.

OCS Safety for Transit, Light and Heavy Rail Employees

Intended for new and existing Light Rail and Heavy Rail transit employees such as station attendants and administrative personnel.

OCS Worker Safety

Target OCS and Heavy Rail employees such as MOW, electrical crews, and train operators.

Emergency Responders

Intended for community and agency emergency responders such as EMS, police and fire personnel.
